SOLIGEN STRENGTHENS ITS BOARD OF DIRECTORS

For Immediate Release
September 5, 1996

AMEX: SGT.EC
VSE: SGT

Northridge, California -- Soligen Technologies, Inc. (AMEX:SGT.EC), today announced the appointment of Mr. Kenneth Friedman to the Board of Directors. "Adding Mr. Friedman to our board of directors adds substantial financial and strategic planning experience as well as M&A and financing expertise which are needed while facing the growth of Soligen's Parts Now service," said Yehoram Uziel, President and CEO. "Mr. Friedman has been an advisor to the company for the last 18 months. He is very familiar with the company and its officers. His expertise will assist Soligen in planning and implementing its expansion".

Mr. Friedman has served on a number of boards of directors and advisory boards. Prior to founding Friedman Enterprises, an investment bank and investment company that specializes in mergers and acquisitions, raising debt and equity capital, and advising those involved in troubled companies. Mr. Friedman was President, Founder, and a member of the board of directors of Houlihan, Lokey, Howard & Zukin Capital, a nationally renowned investment bank and a subsidiary of Houlihan, Lokey, Howard & Zukin, Inc., a preeminent financial advisory company specializing in investment banking, money management, and valuing companies and securities, with offices in Los Angeles, San Francisco, Chicago and New York. Mr. Friedman received his MBA from Harvard Business School.

Soligen's DSPC[®] technology is a proprietary fabrication process for metal parts that produces ceramic molds for metal casting directly from a CAD file. By this method, Soligen is able to produce a first article metal part that bypasses the traditional need for tooling. Additionally, Soligen's Parts Now[®] produces production tooling for larger runs of metal castings from the same CAD file as the approved part. Soligen has combined its DSPC[®] technology with conventional casting methods and Computerized Numerical Control (CNC) machine practices. By combining these three production elements, the Company has created the first "one-stop-shop" for functional metal parts that are made directly from a CAD file and that are ready for assembly. This service, known as Soligen's Parts Now program has become a single source for out-sourcing of metal parts.
